Catalog Punch-Out and EDI

• Punch-Out is a software solution for standard and cut-to-size articles. The customer receives product information in his ERP through access to the Angst+Pfister catalog, orders are sent via EDI
• Involvement of external IT companies necessary

Advantages of EDI and Punch-Out

EDI

• Increased efficiency and automatic order processing
• Transfer of article and price data
• Angst+Pfister absorbs order error messages, apart from that no manual interactions necessary
• Orders can be processed directly with customer article numbers – data quality reduces the error rate

Punch-Out

• Search and gathering of product information for orders in the Angst+Pfister catalog
• Cart is transmitted to the interface for customer order systems (OCI). No upload of Angst+Pfister product information into the customer’s ERP necessary
• Possibility to use customer’s product codes
