

# Now online: The APSOparts® cut-to-size configurator for plastic plates

Sascha Müller, Operating Manager, APSOparts®

High-precision cut-to-size sawing is naturally all part of the service at Angst+Pfister. And now, customers also can easily and conveniently calculate and order plastic plates cut accurately to the millimeter around the clock from APSOparts®, Angst+Pfister's online shop. The innovative cut-to-size configurator is always focused on the customer's best interest and is a true novelty in the industrial parts supply business. It simplifies the ordering process, constantly provides full cost transparency and pays off on the bottom line by saving you substantial time and money.

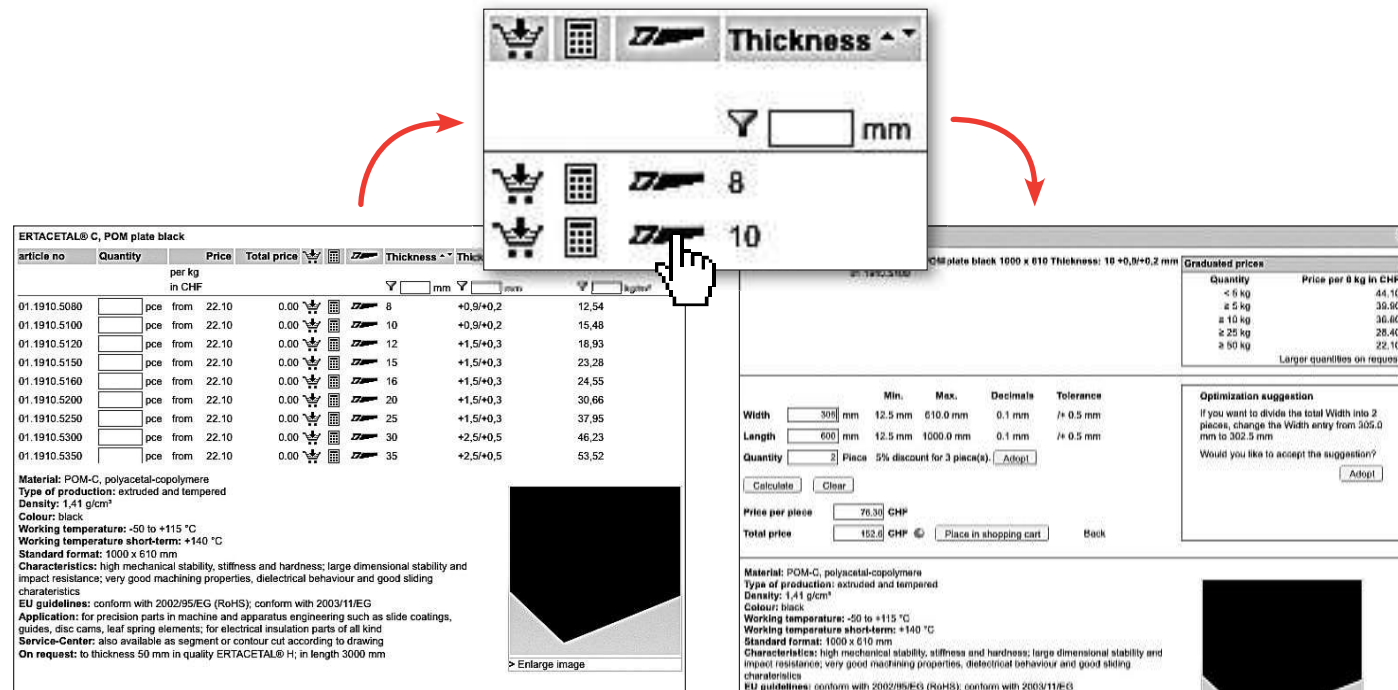

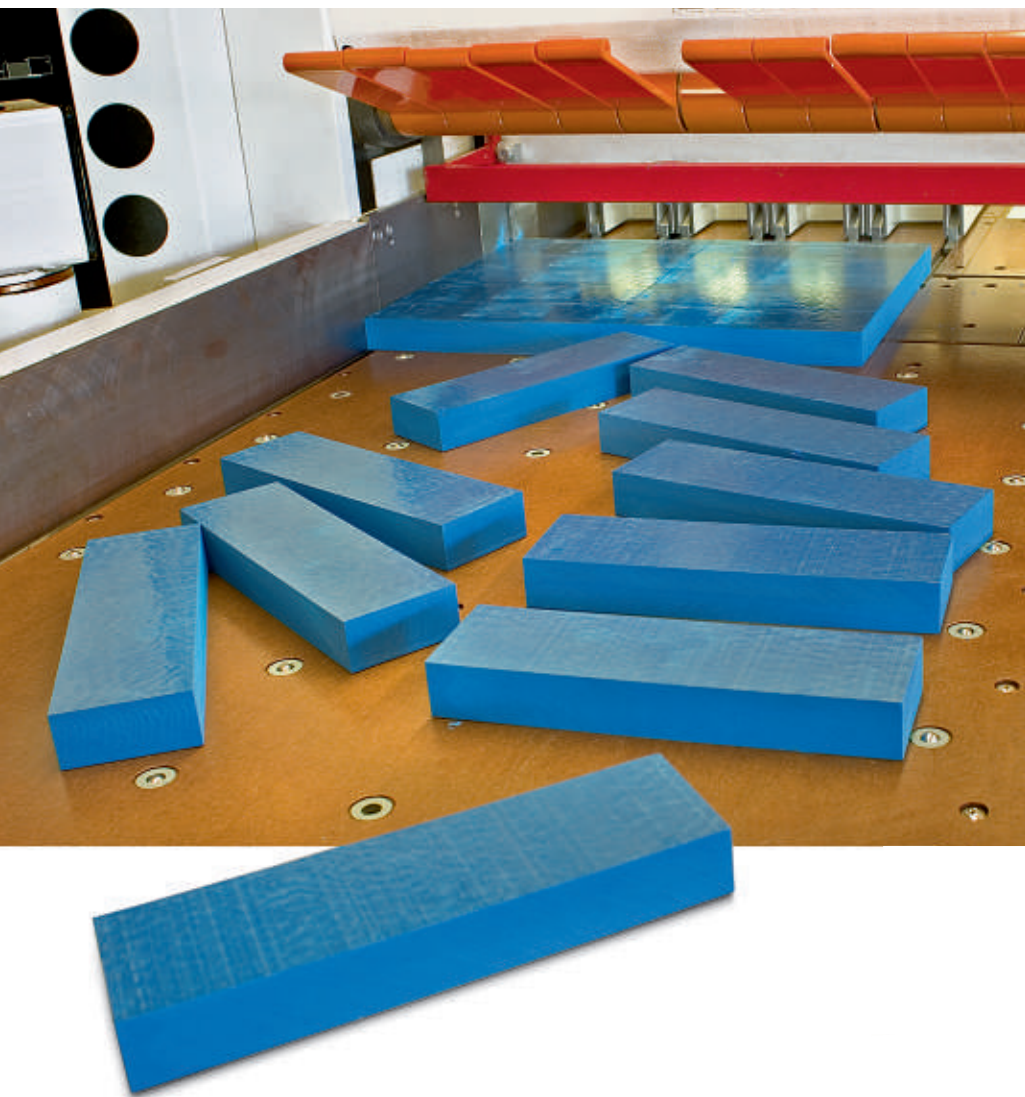

Figure 1

Figure 2

As a leading supply partner for engineering plastics technology, the Angst+Pfister Group includes a full range of thermoplastics in its extensive product assortment. Several well-known members of this family of deformable materials – such as PA, PP, PET, PEEK and POM – are available as semi-finished stock in a number of different basic formats. In this context, one particular service provided by the Angst+Pfister Service Center is especially appreciated by customers: on request, your plastic elements can be directly cut to the right size, enabling plates, round rods, tubes or profiles to be put into use immediately without any additional processing. Placing orders for this valuable preliminary work generally used to have to be done by telephone or in writing, but today the APSOparts® cut-to-size configurator gives customers a new option for thermoplastic plates that is firmly integrated in Angst+Pfister's online shop.

### Clear and comprehensible layout for entire plates

The order entry interface is intuitively designed and easy to understand, and all it takes is a few quick steps to place an order. First, the customer selects the desired product, for example a certain type of POM plate with a thickness of 10 millimeters. All of the material properties such as color, working temperature range and application spectrum are listed in factsheet style, and all the orderer has to do is enter the required number of pieces next to the article number. On the basis of the net price per unit, the total order price is calculated; a detailed list of graduated prices can be viewed by clicking on the pocket calculator symbol. The item can then be placed in your personal shopping cart (by clicking on the icon).

### Handsaw icon

For almost all thermoplastics, a third icon now appears next to the shopping cart and pocket calculator symbols: a handsaw (figure 1), which symbolizes the APSOparts® cut-to-size option that every customer can utilize if needed after logging in. A click on the handsaw opens up a page with three entry fields: the length and width of the cut-to-size plates can be precisely specified to one decimal place within the minimum and maximum size range (figure 2). After entering the quantity of pieces you need, just click on the "calculate" button, and the net total price is displayed within seconds.

### Costs fully under control

The cut-to-size configurator is a handy tool for customers in numerous respects. It creates transparency, simplifies ordering and gives you complete flexibility: the cut-to-size configurator stands at the ready for customers seven days a week, 24 hours a day! And of course it goes without saying that you can still place personal orders by telephone.

### Customer-friendly solution

Visualization of the order volume couldn't be more transparent. During the calculation process, the next-highest discount level is automatically pointed out to the customer, thus always providing the possibility to potentially optimize the order by adjusting the order quantity, saving you time and money. All in all, the APSOparts® cut-to-size configurator makes an essential contribution to Angst+Pfister's never-ending mission to seek and find new pathways for customer-friendly solutions.

### The Angst+Pfister outlet shop

And now, discover the newest addition to our sales channels! The new Angst+Pfister outlet shop offers you a selection of standard items from the Angst+Pfister product range at sensationally low bargain prices!
