

Automated Packaging Solutions

Angst+Pfister has expanded its internal service capacity to offer new packaging solutions.

With our capabilities in automated packaging of small parts, set configurations and set packaging our customers benefit from optimizations in inventory management and distribution of spare part kits.

Angst+Pfister's automatic film packaging machine is designed for shaping, filling and sealing bags made of PE or PP film. Flat films are always processed, combining the advantages of reduced set-up times, high machine performance and operational dependability.

Services

- Automated packaging of items up to Ø 60 mm, other dimensions on request
- Set-building (half-automated for high efficiency)
- Sub-assembly
- Customer-specific packaging
- Precise piece counting ensures correct filling capacity per packaging unit

Labeling

- Hot foil and thermal transfer printer for direct film printing
- Label printing with variable additional information (e.g. technical drawings, customer logo) according to customer requirements
- Printing of different barcode types (2D, QR Code, GS1 Databar, EAN etc.) possible

Packaging material

- Different types of PE or PP film available (e.g. transparent, UV-resistant)
- Customer-specific multicolor foil on request

Bag chain

- Opening and separation perforation possible
- Non-perforated bags also available
- Uniform labeling of each bag
- Variable number of bags per chain on request
- Single bag size within one chain

Multi-chamber bag

- Opening and separation perforation possible
- Non-perforated bags also available
- Label on first bag of chain only (e.g. master number of the set)
- Number of chambers on request
- Various customized bag sizes within one chain

Single bag

- Opening perforation or non-perforated bag available
- Use of transparent or UV-resistant film
